SunOS™/Solaris™ Services

for DocuPrint Network Printers

Simple, On-Cue Printer Management

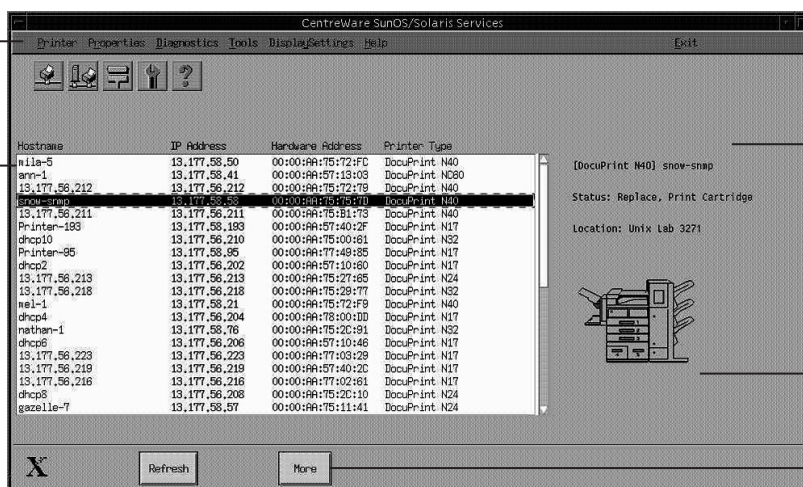

Xerox CentreWare SunOS™/Solaris™ Services is the easy-to-use printer management software solution for Xerox DocuPrint printers. Thanks to our Solaris™ Ready Certification, users and integrators can count on smooth, simple Xerox network printer operation within a Sun™ environment. CentreWare SunOS™/Solaris™ Services, combined with Xerox expertise in network printing, offers a high-performance printing solution users can put to work right out of the box.

Key Features and Benefits of Xerox CentreWare SunOS™/Solaris™ Services

Printer Queue Setup Wizard

CentreWare SunOS™/Solaris™ Services' step-by-step guide simplifies the process of enabling and connecting Xerox printers to a network. Printer queues are easily created and IP addresses automatically discovered, thereby eliminating the need to manually enter IP addresses. The setup options for each printer include peer to peer, client to print server, and print server mode.

Streamlined Software Installation

Driver installation and management has been streamlined with the inclusion of UNIX™ drivers in CentreWare SunOS™/Solaris™ Services, eliminating the need to locate and install drivers separately. Any driver or CentreWare SunOS™/Solaris™ Services updates can now be handled all at once, reducing the time required for software installation and maintenance.

Remote Configuration and Management

CentreWare SunOS™/Solaris™ Services allows system administrators to remotely configure, monitor and manage all supported Xerox printers on local and wide area networks. Queues can be configured with standard defaults or as specified by the users.

Printer and Consumable Status

No need to worry about playing the guessing game when it comes to a printer's status. CentreWare SunOS™/Solaris™ Services allows the administrator to perform up-to-the-minute status checks to keep Xerox printers fully operational. For example, administrators can monitor the status of toner and other consumables on Xerox printers, and determine when such supplies have been depleted.

Diagnostics and Troubleshooting

The accessibility of printer and network information provides administrators with the means to quickly and accurately detect network printing problems and perform test diagnostics. By minimizing printer downtime, administrators will improve customer satisfaction with network printing.

Solaris™ Ready Certification

Xerox printers have been put to the test at Sun's™ Independent Test Labs. They not only meet the exacting standards of functionality and interoperability required for Solaris™ Ready Certification, they also fit into a Sun™ environment right out of the box. The DocuPrint N series printers, for example, come standard with built-in networking and Adobe PostScript.

Supported Environments

Solaris™ v2.4, v2.5, v2.5.1, and v2.6 operating environment
SunOS™ v4.1.3 and v4.1.4 operating system
HP UX 10.2, AIX v4.2 and v4.3, DEC v4.0, and SGI v6.2

Printer Support:

DocuPrint N17, DocuPrint N24, DocuPrint N32, DocuPrint N40, DocuPrint C20/NC20, DocuPrint NC60, DocuPrint C55, DocuPrint 4512*, DocuPrint 4517**, and Phaser® 1235

* DocuPrint 4512 requires firmware software version 600.146 or higher.

** DocuPrint 4517 requires firmware software version 2.0 or higher.

Limited status information is provided for Hewlett-Packard JetDirect connected printers.

Software Distribution

Xerox CentreWare SunOS™/Solaris™ Services can be obtained with the purchase of a Xerox network printer, or electronically from our CentreWare Network Printer Services web site at <http://www.xerox.com> or <ftp://xerox.com>.
