

Printing from DOS

Note . *Driver-selectable TekColor color correction features are available only through the Tektronix drivers for the Windows environment and Macintosh computers.*

Printing from a driver

Many DOS applications include printer drivers for Tektronix printers. Check the application you are using for a printer driver for a Phaser 340. Install and use the driver according to the application's documentation.

If the application you are using does not have a driver for the Phaser 340:

- Check to see if other Tektronix Phaser series printers are listed, and choose one of those. Otherwise, you can use a generic color PostScript printer driver. However, generic drivers do not have information on the printer's page sizes and image areas, and images may be clipped or shifted when printed.
- Contact the application's vendor, or call Tektronix Customer Support in the U.S. and Canada at **1-800-835-6100**, for printing information. Outside the U.S. and Canada, contact your local Tektronix reseller.

Refer to the *Phaser 340 Color Printer User Manual* for information on using the DOS **MODE** command to disable timeouts on a parallel port.

Using color corrections

DOS drivers do not include the TekColor color correction options.
