Using the Macintosh utility files

The Macintosh Driver and Printer Utilities diskette contains compressed archive files with **.sea** extensions. These compressed files each contain a group of files. For example, the *Phaser 340 Utilities.sea* file contains the printer utility files for performing such tasks as enabling the error handler. You need to decompress an entire archive file onto your hard disk, then delete the individual files you don't want to use.

- *Phaser 340 Apps.sea* contains the printer description files .

- *Phaser 340 Samplers.sea* contains the color sampler charts and the font sampler.

- *Phaser 340 Utilities.sea* contains the utility files .

- *Phaser Screen Fonts.sea* contains the standard 17 screen fonts.
