Printing from an application

The *Phaser 340 Apps.sea* archive file on the Macintosh Driver and Printer Utilities diskette contains printer description files for your printer. Decompress these files before continuing.

The printer description files are required by some applications; *refer to your application's documentation to determine if you need to use one or more of these files.*

You should always use the most current printer description file. To determine the **date** of the file you are using, do the following:

1. Select (highlight) a file and choose **Get Info** from the **File** menu. Make a note of the version date.

2. Check the Tektronix Bulletin Board Service (BBS) to see if the printer description files you have are the most recent.

A few applications and their corresponding printer description files are listed in the table below.
