Sharing the printer on a network

Driver, utility files, and front panel interactions

If your Phaser 350 printer is shared by other users on a network, using the downloadable utility files or the printer's front panel to change the printer's default color correction setting can affect prints made by other users.

■ When you print from a supported driver with any TekColor color correction selection *except* **Use Printer Setting**, the driver selection *overrides* the following selections *for prints made from the driver*:

   ■ A color correction utility file, if one has been downloaded to the printer.

   ■ The selection on the printer's front panel `TekColor Corrections` menu.

- When you print from a supported driver with the **Use Printer Setting** option, your images are printed with one of the following selections:

    - A color correction utility file, if one has been downloaded to the printer.

    - The selection on the printer's front panel `TekColor Corrections` menu.

- When you print from a non-supported driver, your images are printed with one of the following selections:

    - A color correction utility file, if one has been downloaded to the printer.

    - The selection on the printer's front panel `TekColor Corrections` menu.

- If the colors on your prints are not what you expected, and your system administrator has disabled some of the printer's front panel menus, ask them what settings are in effect and whether a color correction utility file has been downloaded to the printer. You can also print a configuration page to see the current color correction selection.
