Printing from DOS

Note *Driver-selectable TekColor color correction features are available only through the Tektronix drivers for the Windows environment and Macintosh computers.*

Printing from a driver

Many DOS applications include printer drivers for Tektronix printers. Check your application to see if it was shipped with a printer driver for a Phaser 540. Install and use the driver according to the application's documentation.

If the application you are using does not have a driver for a Phaser 540:

■   Check to see if other Tektronix Phaser series printers are listed, and choose one of them. Otherwise, you can use a generic color PostScript printer driver. However, generic drivers do not have information on the printer's page sizes and image areas, so images may be clipped or shifted when printed.

■   Contact the application's vendor, or call Tektronix Customer Support in the U.S. and Canada at **1**-**800**-**835**-**6100**, for printing information. Outside the U.S. and Canada, contact your local Tektronix reseller.

Refer to the *Phaser 540 Color Printer User Manual* for information on using the DOS **MODE** command to disable timeouts on a parallel port.

Using color corrections

DOS drivers do not include the TekColor color correction options.
