

## Printing PANTONE Colors

If Phaser 550 printer-specific PANTONE Colors are not printing as expected, make sure you are printing without any color corrections.

If you have questions about PANTONE Color Matching, refer to the HAL article on PANTONE Colors.

There are many variables in process reproduction of colors generated by the Phaser 550 printer, any one of which may affect the quality of the PANTONE Color simulation, including:

- Type of ink used
- Type of ink film used
- Effective final resolution
- Dot structure/halftones
