

Printing from DOS

Note *Driver-selectable TekColor color correction features are available only through supported printer drivers such as the Adobe PS3 driver or the Windows 95 PostScript driver. With other drivers, use the printer's front panel or the downloadable utility files to select color corrections.*

Note *If you are printing ASCII files directly to the printer, you will need PCL5 activated on your printer.*

Printing from a driver

Many DOS applications include printer drivers for Tektronix printers. Check the application you are using for a printer driver for a Phaser 550 printer. Install and use the driver according to the application's documentation.

If the application you are using does not have a driver for a Phaser 550 printer, do one of the following:

- Check to see if other Tektronix Phaser series printers are listed, and choose one of those.
- If no Tektronix Phaser series printers are listed, you can use a generic color PostScript printer driver. However, generic drivers do not have information on the printer's page sizes and image areas, and images may be clipped or shifted when printed.
- Contact the application's vendor, or call Tektronix Customer Support in the U.S. and Canada at 1-800-835-6100, for printing information. Outside the U.S. and Canada, contact your local Tektronix reseller.

Refer to the *Phaser 550 Color Printer User Manual* for information on using the DOS **MODE** command to disable timeouts on a parallel port.
