

## Parallel connection to Tektronix printers

Sending PostScript utility files to the printer for configuration and TCP/IP authorization can be accomplished by using the printer's parallel port. If you use this method, you need the correct parallel cable or adapter. These are available from Tektronix:

- Parallel cable (part number 012-1468-00). 36-pin high-density plug to 25-pin DSUB plug; 3 meters (9.84 feet).
- Parallel adapter (part number 013-0299-00). Converts 36-pin low-density 1284-B plug to 36-pin high-density 1284-C plug.
