Tektronix PhaserPrint software for UNIX and VMS environments

For Unix and VMS environments, Tektronix offers PhaserPrint. PhaserPrint provides fast raster screen copy printing to Tektronix color printers. PhaserPrint also provides a graphical user interface for push-button control of Tektronix printer features.

PhaserPrint software is available for these workstations:

Sun:SunOS 4.1.X, Solaris 2.X
SGI:IRIX 4.0.5 and 5.2
HP 9000 700/800:HPUX 9.X
IBM RS/6000:AIX 3.2
DECstation:Ultrix 4.X
DEC Alpha AXP:OSF/1 1.3

Note   *Tektronix offers a similar solution for DEC VAX/VMS and DEC Alpha AXP/OpenVMS.*

PhaserPrint works with the workstation's native spooling system to print PostScript files and raster files in these formats: Sun Raster Format (SRF), **xwd**, and SGI RGB.

If you ordered the TCP/IP Ethernet option for your printer, you received a demonstration copy of PhaserPrint on a compact disk (CD). If you did not receive a demonstration CD but would like one, contact your dealer, local Tektronix office or in the United States or Canada call **1**-**800**-**835**-**6100.**

For information on printing from workstations and setting up spooling systems, you can contact HAL, the Tektronix automated fax system by calling direct (**503) 682**-**7450** or, in the United States or Canada, by calling toll-free **1**-**800**-**835**-**6100**.
