Installing files from the UNIX version of the network utilities diskettes

The files on the UNIX version of your printer's network utilities diskettes are in UNIX **tar** format.

Listing the contents of the diskette

Type this command:

> **tar** -**tvf** /**dev**/*devicename*

For example, on a Sun workstation, type:

> **tar** -**tvf** /**dev**/**fd0**

Extracting the files from the diskette

1. Change (**cd**) to the directory on your workstation where you want the files to reside.

2. Type this command:

   > **tar** -**xvf** /**dev**/*devicename* [*dir*]
   > [*file*]

   where specifying *dir* extracts an entire directory, specifying *file* extracts a single file, and no arguments extracts the contents of the entire diskette, while retaining the directory structure of the diskette.

3. Eject the diskette. For example, on a Sun workstation, type:

   > **eject**
